
(a) Injection schedules, equal volume
rate (m3/day)
time (days)
(b) Coulomb stress change on the patch
dS (MPa)
time (days)
(c) Cumulative excess events
N/r - t (days of background)
time (days)
(d) Ranking depends on the counting window
events / constant-rate events
const
step-up
taper
optimum
schedule
constant
step-up (4 steps)
taper (last 30 %)
global optimum (Thm 1)
counted to shut-in
counted incl. post-injection tail
