
(a) OTN-2 (2020) injection rate
rate (l/min)
days since start
(b) OTN-2 cumulative events (M >= -1.45)
events
days since start
(c) Gain of the optimum over constant rate
gain (%)
theta = T_k / T_inj
(d) Cost of the operator schedule vs constant rate
extra events (%)
theta = T_k / T_inj
actual
optimal, same volume
observed
Dieterich fit
